PROFILE

Full Stack Developer with a passion and experience in developing full stack solutions using **ASP.NET Core** and **Angular**, with expertise in front-end and back-end integration, authentication, and database management.

TECHNICAL SKILLS

- **Backend Development:** .NET Core / ASP.NET Core , C# (OOP) , Web APIs , LINQ.
- **Databases & ORMs:** SQL Server ,SSMS , Entity Framework Core , Database Design & Normalization.
- **Frontend Development:** Angular , TypeScript , JavaScript , RxJS (BehaviorSubject) , HTML5 , CSS3 , Bootstrap.
- **Architecture & Security:** Clean Architecture , JWT Authentication & Authorization , Role-based Access Control (RBAC).
- **Tools & Technologies:** Git & GitHub , SignalR (Real-time) , WordPress, Swagger.

PROJECTS

E-Commerce Management System

ASP.NET Core, Angular, EF Core, SQL Server, SignalR

- Designed and implemented scalable RESTful APIs using ASP.NET Core and C#.
- Applied Clean Architecture principles to ensure maintainability and separation of concerns.
- Built a lightweight event-driven notification system with role-based targeting.
- Implemented real-time updates using SignalR for admin and user workflows.
- Developed responsive Angular UI with dynamic state management (BehaviorSubject).
- Designed SQL Server database schema with proper normalization and relational integrity.
- Integrated ASP.NET Identity with role-based authorization and secure admin seeding.
- Used Git for version control and source code management.
